The image features a white ATM machine on the right side, partially obscured by a green, textured overlay that resembles a gas leak or smoke. The ATM has a screen, a keypad, and a card slot. The background is a mix of white and green, with the green areas having a grainy, splattered appearance. The text is positioned on the left side of the image.

GP-X

ATM gas protection system

GP-X from ATM Safe

THE ULTIMATE PROTECTION AGAINST GAS AND FIRE ATTACKS

The GP-X gas protection system has been developed as the ultimate solution for protecting your ATM from explosions, fire and cash loss.

Our advanced gas detection and explosion control system, combined with UL approved fire protection systems, GP-X has been proven to deliver unparalleled protection against real life gas attacks. Winner of IFSEC and FIREX combined fire and security product of the year.

Key features:

- Fastest Gas Detection Available
- Instant Alarm Activation
- Explosion Protection
- Fire Protection
- Indefinite Gas Attack Protection
- Approved by UK Banks
- Approved by ATM Manufacturers Worldwide
- Proven under Attack
- ATM Safe System

Award winning solution

WINNER of the prestigious **2018 ATMIA Global Industry Security Award for ATM Physical Security Excellence.**

“As CEO of the worldwide ATM Industry Association, I would like to congratulate Safe & Vault Company for successfully bringing the innovative Gas Protection X (GP-X) product to market. It takes years of investment and dedication to go from R&D, to prototype and then to make an impact in a competitive market. The judges were very impressed with how GP-X directly combats the growing global threat of ATM gas attacks, protecting ATMs, cash, property and, most importantly of all, the cardholders using ATMs. Brilliant!”
